1. About This Manual

This manual contains information about maintenance and service of acer products. Use this manual to perform diagnostics tests, troubleshoot problems, and align the acer product.

1.1 Trademark

The following terms are trademarks of Acer Inc. :

Acer

Importance

Only trained service personnel who are familiar with this Acer Product shall perform service or maintenance to it. Before performing any maintenance or service, the engineer MUST read the "Safety Note".

2. Introduction

This section contains general service information, please read through carefully. It should be stored for easy access place for quick reference.

2.1 RoHS (2002/95/EC) Requirements

– Applied to all countries require RoHS.

The RoHS (Restriction of Hazardous Substance in Electrical and Electronic Equipment Directive) is a legal requirement by EU (European Union) for the global electronics industry which sold in EU and some counties also require this requirement. Any electrical and electronics products launched in the market after June 2006 should meet this RoHS requirements. Products launched in the market before June 2006 are not required to compliant with RoHS parts. If the original parts are not RoHS complaints, the replacement parts can be non ROHS complaints, but if the original parts are RoHS compliant, the replacement parts MUST be RoHS complaints.
If the product service or maintenance require replacing any parts, please confirming the RoHS requirement before replace them.

2.2 Safety Notice

1. Make sure your working environment is dry and clean, and meets all government safety requirements.
2. Ensure that other persons are safe while you are servicing the product.
   DO NOT perform any action that may cause a hazard to the customer or make the product unsafe.
3. Use proper safety devices to ensure your personal safety.
4. Always use approved tools and test equipment for servicing.
5. Never assume the product's power is disconnected from the mains power supply. Check that it is disconnected before opening the product's cabinet.
6. Modules containing electrical components are sensitive to electrostatic discharge (ESD). Follow ESD safety procedures while handling these parts.
7. Some products contain more than one battery. Do not disassemble any battery, or expose it to high temperatures such as throwing into fire, or it may explode.
8. Refer to government requirements for battery recycling or disposal.

2.3 Compliance Statement

Caution: This Optical Storage Product contains a Laser device. Refer to the product specifications and your local Laser Safety Compliance Requirements.

2.4 General Descriptions

This Service Manual contains general information. There are 3 levels of service:
Level 1: Cosmetic / Appearance / Alignment Service
Level 2: Circuit Board or Standard Parts Replacement
Level 3: Component Repair to Circuit Boards

3. Product Overview

3.1 Introduction

X203H is defined as our new 20'W model in ACER V series which will be the ACER project in Qisda. X203H is defined as 20'W LCD Monitor supports 1600(H) x 900(V) resolution with DPMS (Display Power Management System) and ACER eColor function. There are double input types, D-sub, and DVI. X203H adopts SEC LTM200KT03 and LGD LM200WD1-TLC1. V203H has included 1W+1W speaker.X203H also support ACM 10000:1.

The features summary is shown as below,

*All panel spec. in Q201 definition depends on the variance of panel source.

*All spec. of monitor need to warm up at least 1hr.

* To test the "Contrast Ratio" and "Luminance" functions, the color status must be "User preset" mode.

* 1. "Contrast Ratio": Set "brightness" at 100, and "contrast" at 50.

* 2. "Luminance": Set "brightness" at 100, and "contrast" at 100.

Feature items	Specifications	Remark
Panel supplier & module name	SEC LTM200KT03 LGD LM200WD1-TLC1	TN, Normally white

AC power input	Yes	90-264 Volts, 47-63 Hz.
DC power input (with AC power adapter)	No	
DPMS supported	Yes	≤1W
LED indicator for power status showed	Yes	Blue/Amber
OSD for control & information supported	Yes	
Multi-language supported for OSD	Yes	EMEA Non-EMEA
Buttons control supported	Yes	6 buttons including 1 monitor power on/off control button.
Flywheel control supported	No	
Scaling function supported	Yes	
Auto adjustment function supported	Yes	
DDC function supported (EDID ver. 1.3)	Yes	DDC2B
DDC-CI support version 1.1 or later	Yes	DDC-CI
Audio speakers supported	Yes	
Audio Jack (input connector) supported	Yes	Line-in connector
Earphone Jack (Output connector) supported	No	
Microphone function supported	No	
Mechanical Tilt base design	Yes	From -5 to +23 degree
VESA wall mounting design	Yes	
Mechanical Rotate design	No	
Mechanical Lift base design	No	
Kensington compatible lock design	Yes	

3.2 Operational Specification

3.2.1 Power supply

Item	Condition	Spec	OK	N.A	Remark
Input Voltage range	Universal input full range	90~264VAC /47~63Hz	√

Note:

1. Show “Input Not Supported” warning message.

   When Vertical Frequency is over 76Hz or under 56Hz, the display is Black and showing “Input Not Supported” warning message. (HDMI supports 50Hz for PAL video signals.)

2. If Hf /Vf is set in the range of 31KHz~83KHz and 56Hz ~76Hz, but is not the above Resolution, then it will display the nearest mode.

4.2.1 Assembly SOP

Preparation before assemble

1. Clean the room for work
2. Identify the area for material
3. Prepare the implement, equipments, materials as bellow:
   1) Press-fixture
   2) working table
   3) Screw-driver
   4) knife*1
   5) glove
   6) cleaning cloth
   7) ESD protection

item	picture	Operation	Tool	Notes
1		Stick the big Al tape to panel which can protect the Light-wire.		The tape must cover the connect of the wire
2		Check and put CLM-F on the cushion carefully,		
3		Assemble the panel on CLM-F.		Go to with Left.

4		Assemble the SPK to the main-SHD, the correct position reference on the picture, then the lock 4 screws to fasten it.	Screw-driver	Keep the ware in. 
5		Assemble the FFC to the I/F, the correct position reference on the picture		Without the gap within
6		Assemble the PCBA to Main-SHD		
7		Lock 3 screws on the PCBA board with this order.	Screw-driver	
8		Lock 2 screws on the SPS board with order.	Screw-driver	

9		Scan for fooling	PC	Card go with panel.
10		Fasten the LVDS to panel and fix the Main-BKT to CLM-F		
11		Stick one Al foil on the right between pane land Main-BTK only for SEC panel		
12		Stick two pieces of Al foil on the under between panel and Main-BTK only for SEC panel		The position refer to the picture
13		Lock screws of side on Main-Chassis with 2/4,based on DVI.	Screw-driver	Attention the order by one to four.

14		Assemble the L-SHD the correct position reference on the picture		
15		Insect the inverter wire one by one and insect the speaker wire		Keep all wires in.
16		Stick a tap to fix the speaker wire		The tap must not stick to the part of the IF
17		Stick a Mylar under the audio connector		

18		Stick an acetic tape to fix the wire one by one as the picture		Not fix the panel to the edge 19		Fix the big Al tape to panel		
20		Assemble the C/B wire to the C/B connect		
21		Assemble the C/B to the BZL and insert the C/B wire to the I/F BD		

22		Fix the C/B wire to the BZL		
23		Check and put CLM-F on the Main-Chassis carefully.		None hurt outside.
24		Assemble the Rear Cover.		
25		Check and put CLM-abs on working table carefully and assemble them together		

26		Assemble the Hinge to the CLM-abs		
27		Lock screws*6 onto the hinge with screw-driver	Screw-driver	
28		Lock 4 screws to RC.	(FABF-DSSDA1-***） 60-80mm ＃2 9±1kg.cm	
29		Cover the CLM of L and R		

4.2.2 Disassembly SOP

Preparation before disassemble

1. Clean the room for disassemble
2. Identify the area for monitor
3. Check the position that the monitors be placed and the quantity of the monitor ;prepare the area or material flow; according to the actual condition plan the disassemble layout
4. Prepare the implement, equipments, materials as bellow:
   1) Press-fixture
   2) Working table
   3) Screw-driver
   4) Knife*1
   5) Glove
   6) Cleaning cloth
   7) ESD protection

item	picture	Operation	Tool	Notes
1		Disassemble the stand → 4 screws	Screw-driver	Kick the board first. 
2		Disassembly the bezel from the monitor, notice the disassembly order : 1.Left (1) parts of bezel 2.Top (2) parts of bezel 3.Bottom (3) parts of bezel 4. Right (4) parts of bezel Don't draw the BZL		When disassembly the bezel ,notice don't bend the C/B .man must wear glove The purpose is loose the BZL
3		Turn over the monitor ,dismantle the Rear cover from the monitor		

4		Tear out the acetic tape		
5		Unlock the wires.		
6		Disassembled the SHD shielding : 5 screw	Screw-driver	
7		Tear down three pieces of Al foil		

8	 	Tear down the Mylar and the tap		
9		Disassembled the AC-soc shielding .		
10		Unlock the LVDS wires.		
11		Disassembled the PCBA shielding : 5 screws	Screw-driver	
12		Disassembled the SPK shielding : 4 screws	Screw-driver	

13		Get off the panel from the bezel		
14		Get off the big tap from the tape		
15		Disassemble the control board		

5. Level 1 Cosmetic / Appearance / Alignment Service

5.1 Alignment procedure (for function adjustment)

5.1.1 Preparation

1. Setup **input** timing to any preset modes or patterns.
2. Enter factory mode (press “Empowering” & “Power” buttons at the same time to turn on monitor).
3. Move cursor into “Burn-in Mode” tag and select “On” to enable burn-in mode.
4. Power off the monitor, remove the input source and then power on again.
5. Setup unit and keep it warm up for at least 30 minutes.
6. Setup input timing ICL-605(1280x1024@75Hz), 32-Grays pattern.
7. Setup unit and keep it warm up at least 30 minutes.

5.1.2. Timing adjustment:

1. Enter factory setting area (press “Empowering” and then press “SOFTPOWER”).
2. Check the settings to following values:

   Contrast = 50

   Brightness = 85

   Color = Warm

   Language = English

   Then, turn off the monitor power.
3. Turn on power enter user area.

5.1.3 ADC calibration (Auto color balance adjustment)

~~Analog only, it is not required for DVI-D input source

1. Setup input timing ICL-605(1280x1024@75Hz), pattern 42(5-Mosaic pattern with white color block) with Analog signals from Chroma video pattern generator. (it depends on Scaler IC supplier's recommendation)
2. Enter factory mode (press "Empowering" & "Power" buttons at the same time to turn on monitor).
3. Move cursor into "Burn-in Mode" tag and select "On" to enable burn-in mode.
4. Close OSD menu then press "Auto" button for auto color adjustment. (This procedure will get optimal gain/offset(clamp) values)
5. Checking if the picture is ok, or reject this monitor and check its circuit board or wire/cable connection.

5.1.4 Color temperature adjustment

1. Setup input timing to any preset modes, pattern 41(full white color pattern) with Analog signals from Chroma video pattern generator.
2. Enter factory mode (press "Empowering" & "Power" buttons at the same time to turn on monitor).
3. Move cursor into "Burn-in Mode" tag and select "On" to enable burn-in mode.
4. Make sure ADC calibration (auto color balance adjustment) had already been done.
5. Measure color temperature by Minolta CA-110 (or equivalent equipment).
6. Adjust the color temperature ~~ Two methods can be used to adjust RED, GREEN, BLUE value of each color temperature, C0/Cool, C1/User & C2/Warm to meet following spec requirement, the 1st method is by using external PC and IIC alignment protocol to do automatic adjustment, and the 2nd method is by manually and must be in factory mode.

Color temperature (C0/cool on OSD)	X+-	0.283+(-) 0.03
	Y+-	0.297+(-) 0.03
	Luminance	
Color temperature (C1/User on OSD)	X+-	
	Y+-	
	Luminance	
Color temperature (C3/Warm on OSD)	X+-	0.313+(-) 0.03
	Y+-	0.329+(-) 0.03
	Luminance	

7. Move cursor into "Burn-in Mode" tag and select "No" to disable burn-in mode.
8. Turns off the monitor power.

5.1.5. Writing EDID data into monitor

1. Setup a **PC** with DDC card.
2. Connect PC to monitor with a D-sub signal cable.
3. Please refer to the Q212 for the correct EDID file.
4. Runs the writing program to write the analog EDID data into EEPROM for analog input(ie. 15-pin D-sub).

5. Repeat step 4 and write the digital EDID data into EEPROM for DVI-D input(ie. 24-pin DVI-D).
6. Read both EEPROM data and confirm it to match with the Q212 definition.

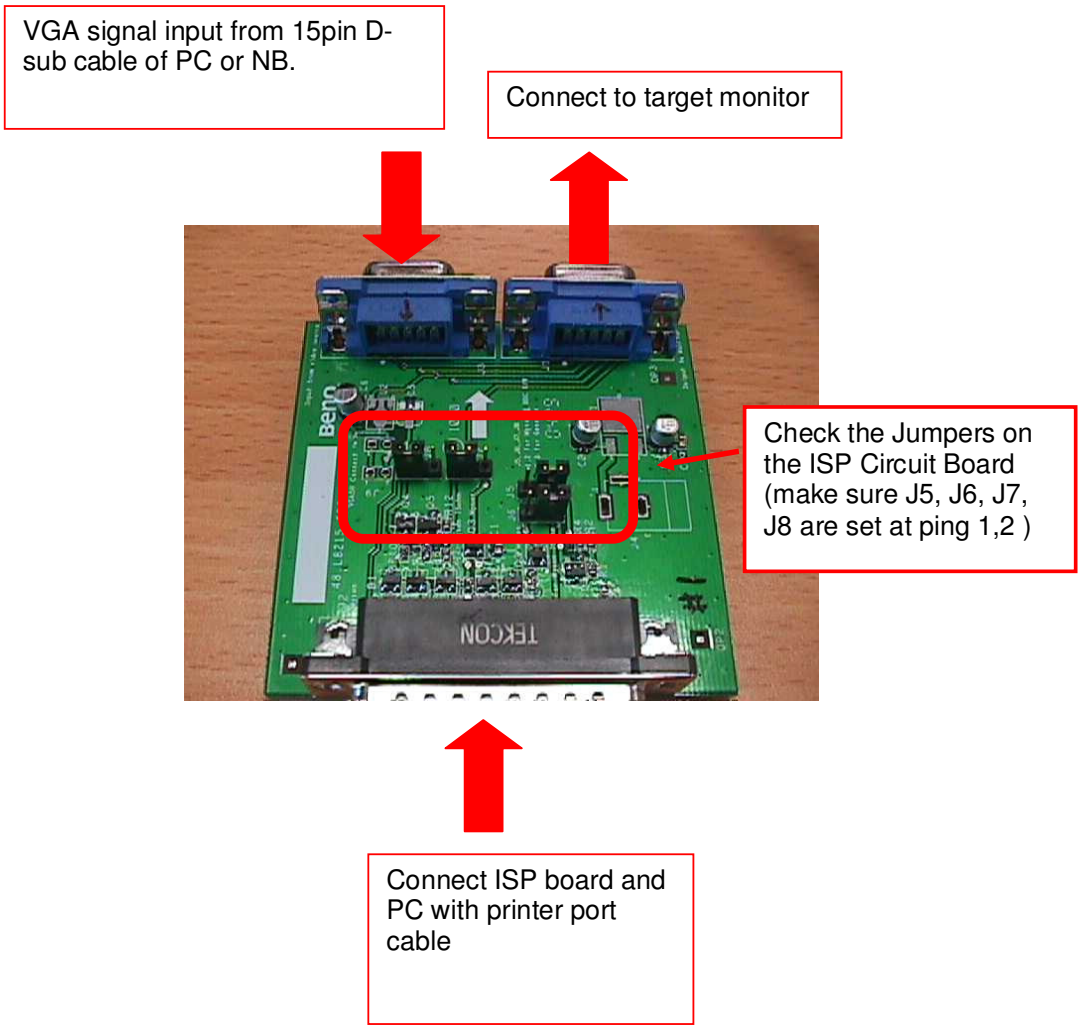
(Note : The DVI-D input may not operation correctly if the digital EDID data do not exist.)

5.2 Software / Firmware Upgrade Process

5.2.1 Hardware prepared:

Hardware Requirement:

1. ISP board x 1



2. DSUB VGA cables x 2
3. Printer cable (with one male connector and another female connector) x 1.
4. PC or Notebook with parallel (printer) port x1.

5.2.2 Firmware Upgrade Procedure

Step 1:

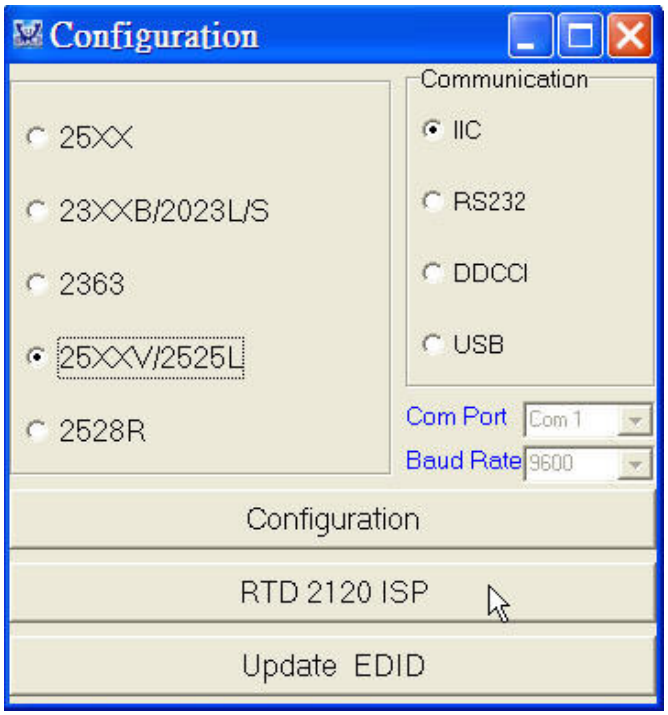
Un-zip Port95nt and install into your computer.

Step 2:

Un-zip ISP application tool (RTDTool)

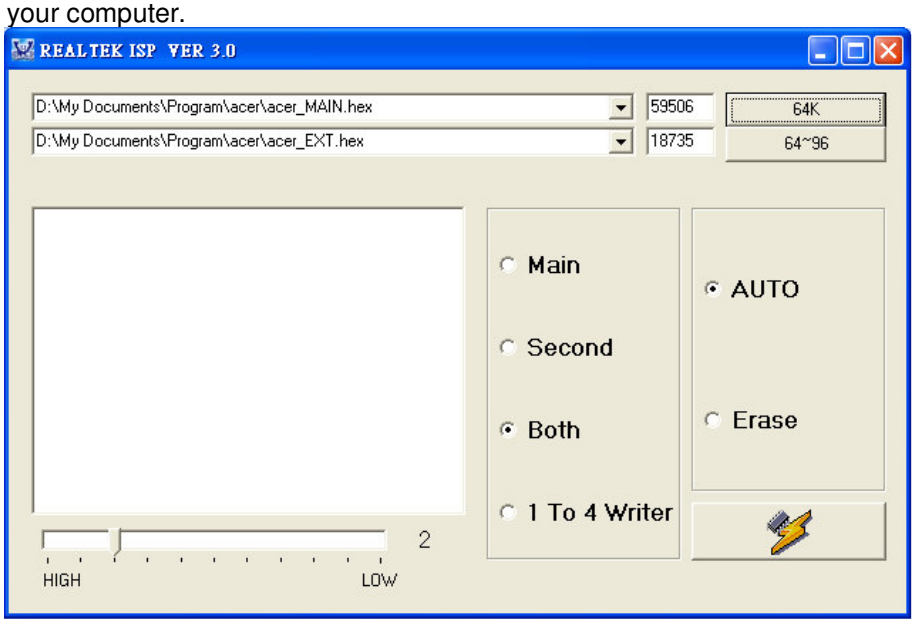
Step 3:

Press “RTD 2120 ISP” button to execute firmware program application.



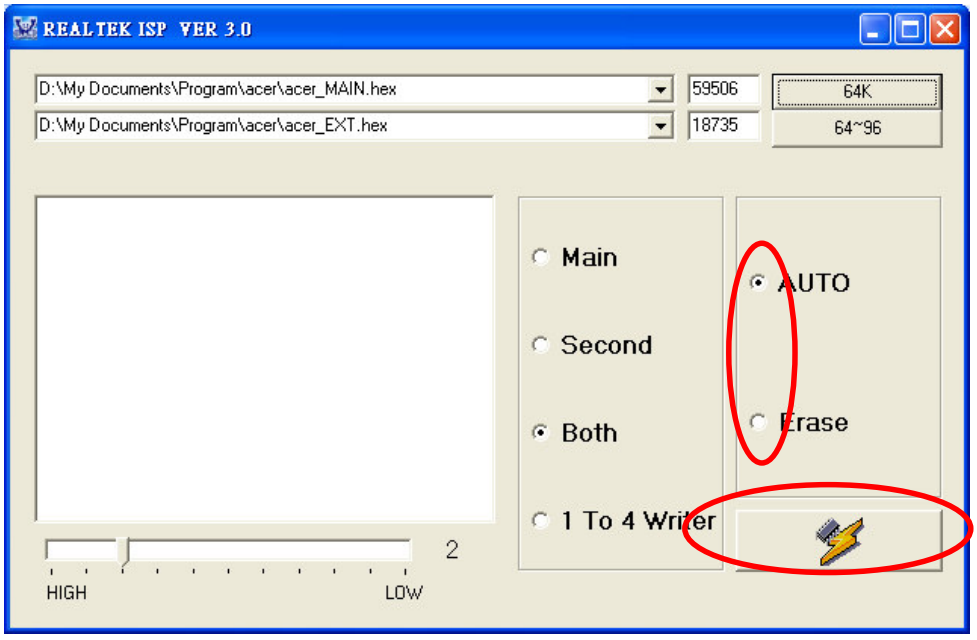
Step 4:

Press “64K” button to load *series*.hex file and press “64~96” button to load *extend*.hex file from your computer.

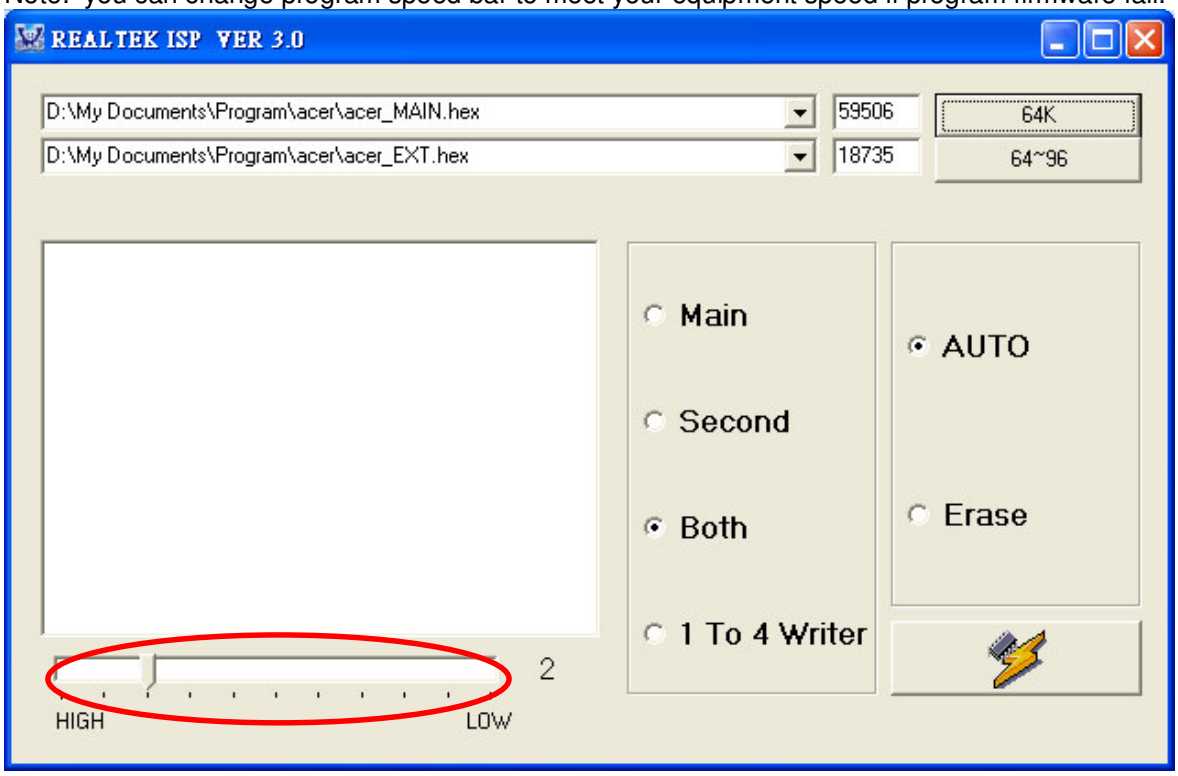


Step 5:

Select “Erase” option and execute lightning button first, and then select “Auto” option and execute lightning button to start upgrade firmware to the monitor.

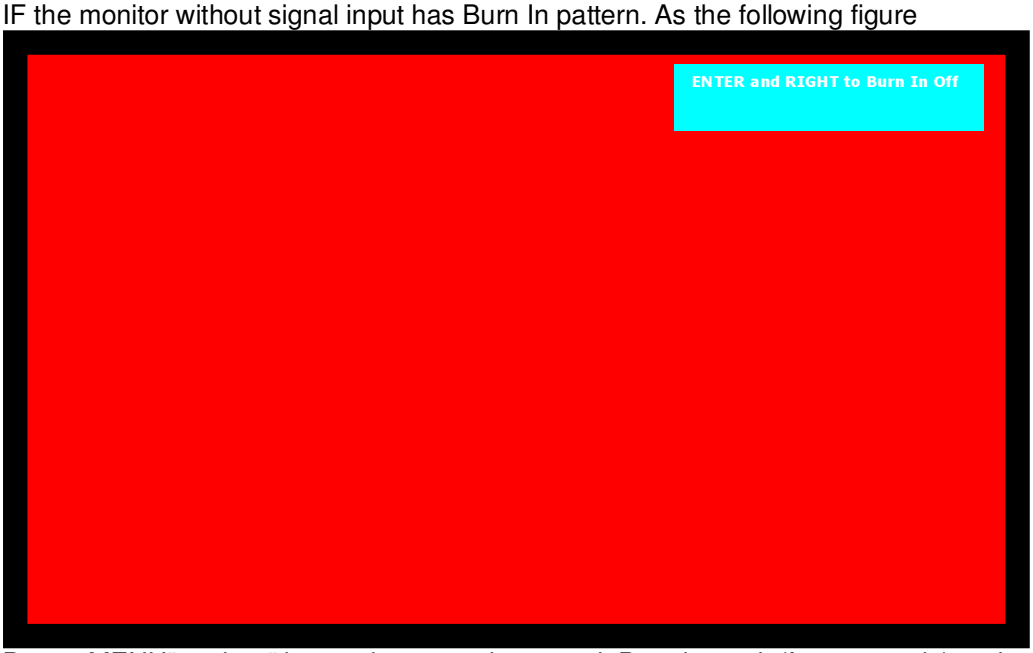


Note: you can change program speed bar to meet your equipment speed if program firmware fail.



5.2.3 Turn Off Burn In

IF the monitor without signal input has Burn In pattern. As the following figure

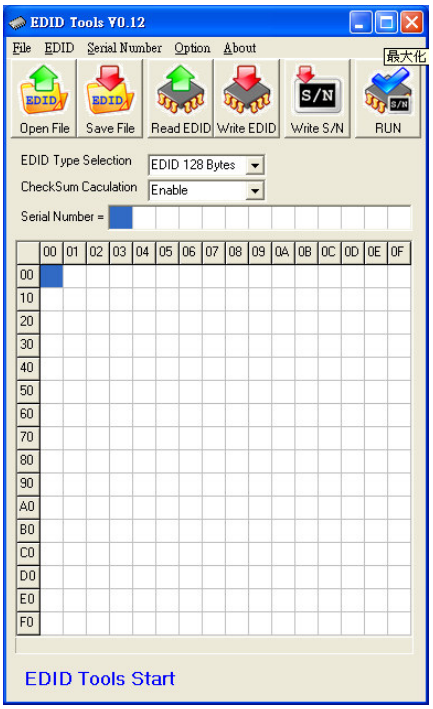


Press “MENU” and “>” key at the same time to exit Burn in mode(factory mode),and soft power key off/on restart the monitor.

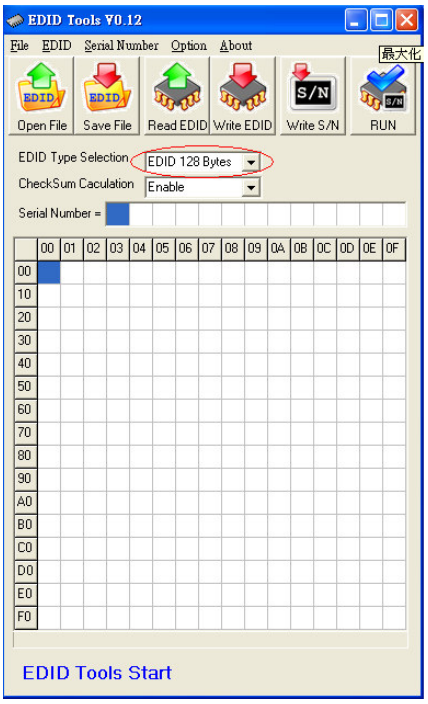
5.3 EDID Upgrade Procedure

Step 1:

Run the program “Q-EDID-V012.exe”, when the UI popped up

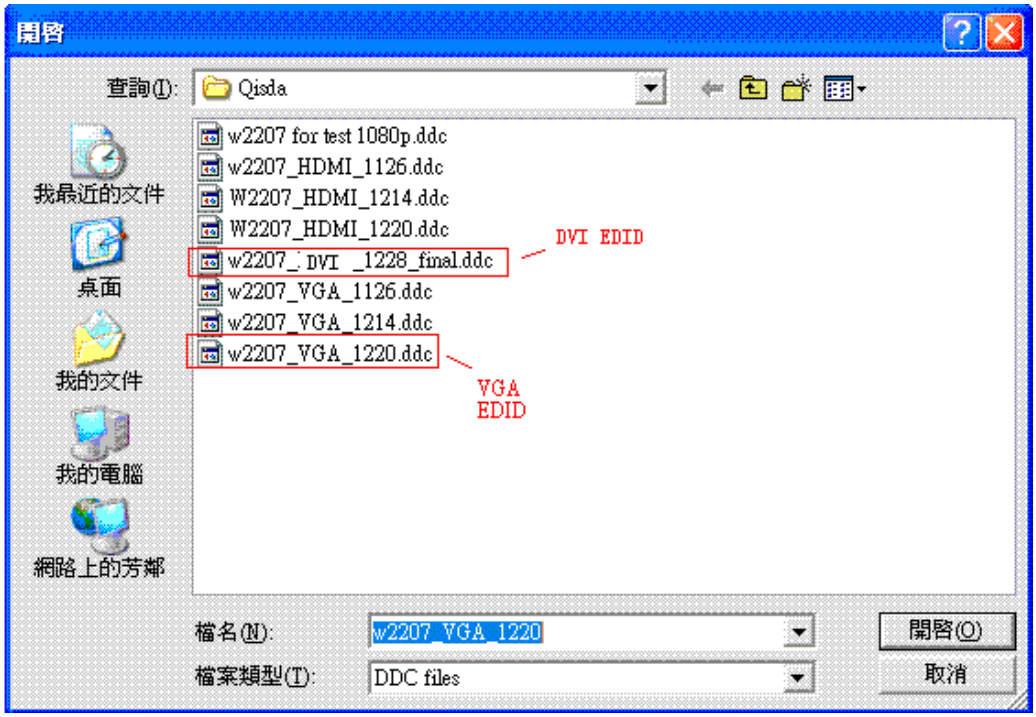


Note: If “VGA” choose 128bytes, and “DVI” choose 128bytes



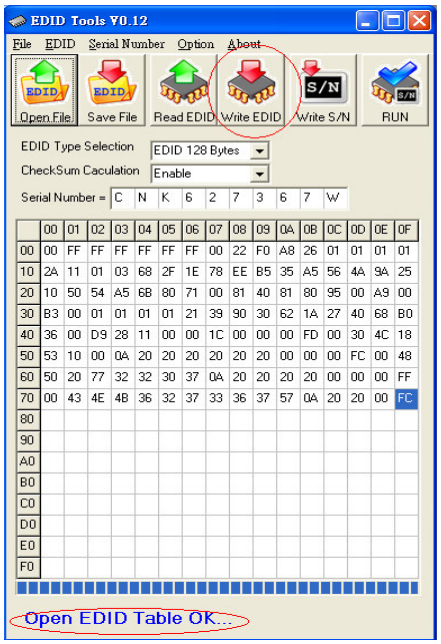
Step 2:

Click “Open File” and select “VGA” or “DVI” EDID file



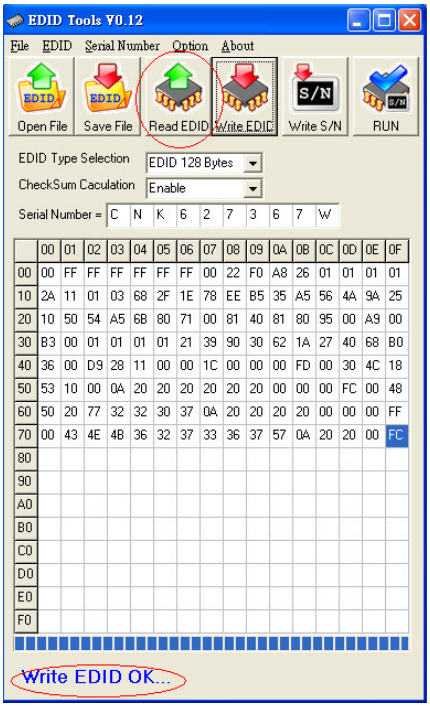
Step 3:

If load file is successful, it shows “Open EDID Table OK..”.
And then, Click “Write EDID” button to update EDID



Step 4:

If write EDID is successful, it shows”Write EDID OK …”
And then, Click “Read EDID” button to check if successful or not.



Step 5:

If read EDID is successful, it shows”Read EDID OK …”

Front panel controls

1 Power LED: Lights up to indicate the power is turned on.

2 Power switch: Turns the power on or off.

3.4 < / > : Press < or > to navigate to the desired function, press Enter to select the function. Press < or > to change the settings of the current function.

5 Menu/Enter: Activate the OSD menu when the OSD is off or activate/ deactivate the adjustment function when the OSD is on.

6 Auto adjust button/Exit:

- a When the OSD menu is active, this button will act as the exit key (OSD menu).
- b When the OSD menu is inactive, press this button for two seconds to activate the Auto Adjustment function. The Auto Adjustment function is used to set the HPos, VPos, Clock and Focus.

7 Empowering Key/Exit:

- a When the OSD menu is active, this button will act as the exit key (exit OSD menu).
- b When the OSD menu is inactive, press this button to select scenario mode.

How to adjust a setting

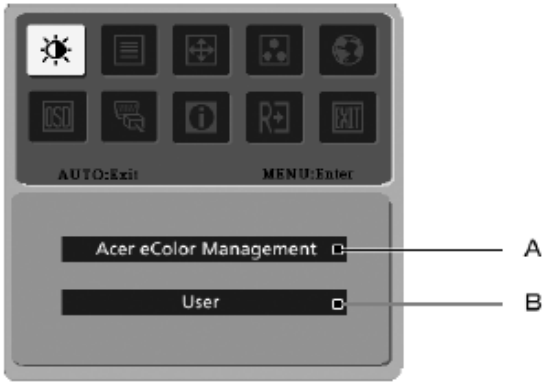
1 Press the Menu button to activate the OSD window.

2 Press < or > to select the desired function.

3 Press the Menu button again to select the function that you want to adjust.

4 Press < or > to change the settings of the current function.

5 To exit and save, select the exit function. If you want to adjust any other function, repeat steps 2 to 4.



A Acer eColor Management: If "Acer eColor Management" is selected, the Acer eColor Management OSD will appear.

B User: If "User" is selected, the standard OSD will appear.

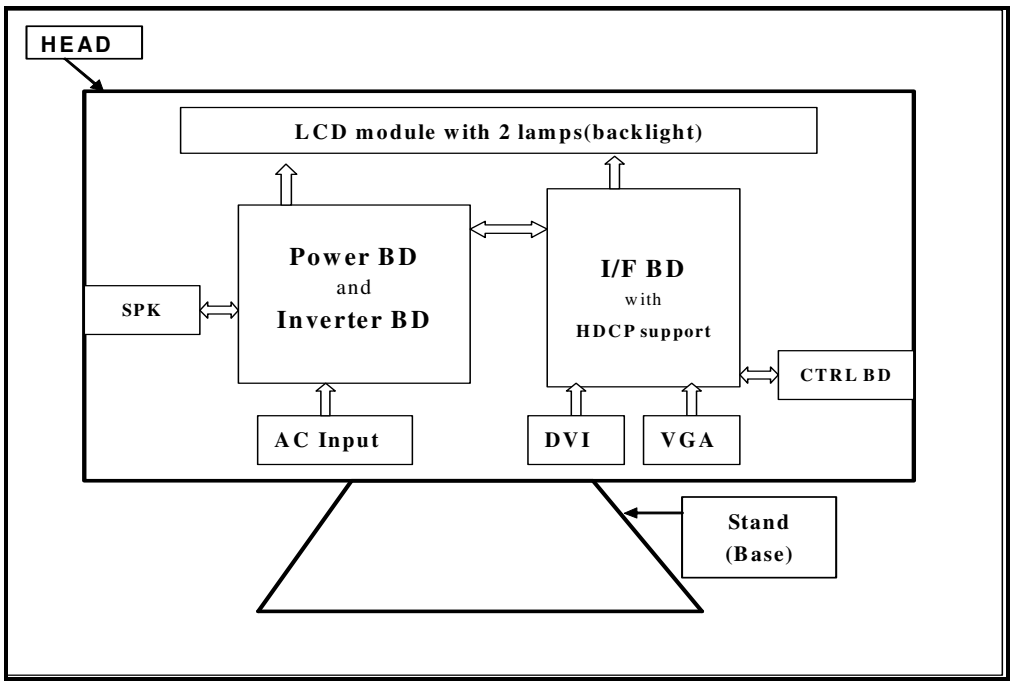
6.2 Circuit Operation Theory

I. Introduction

The X203H is a 20" W (1600x900), LCD type is TN+Film and Normally White, 16.7M colors(R, G, B 6-bit data + Hi-FRC data) TFT LCD with HDCP support monitor. It's have dual (D-SUB and DVI) interface LCD monitor with a 15 pins D-sub signal cable and 24 pin DVI signal cable which support HDCP function. It's compliant with VESA specification to offer a smart power management and power saving function. It also offers OSD menu for users to control the adjustable items and get some information about this monitor. The best function is to offer users an easy method to change input source, DDC/CI Enable and Auto Adjustment items well done just by pressing hot key, we called it "Input Select", "DDC/CI" and "Auto" which can manual controlled items.
X203H also offer DDC/CI function to meet VESA standard.

II. Block diagram

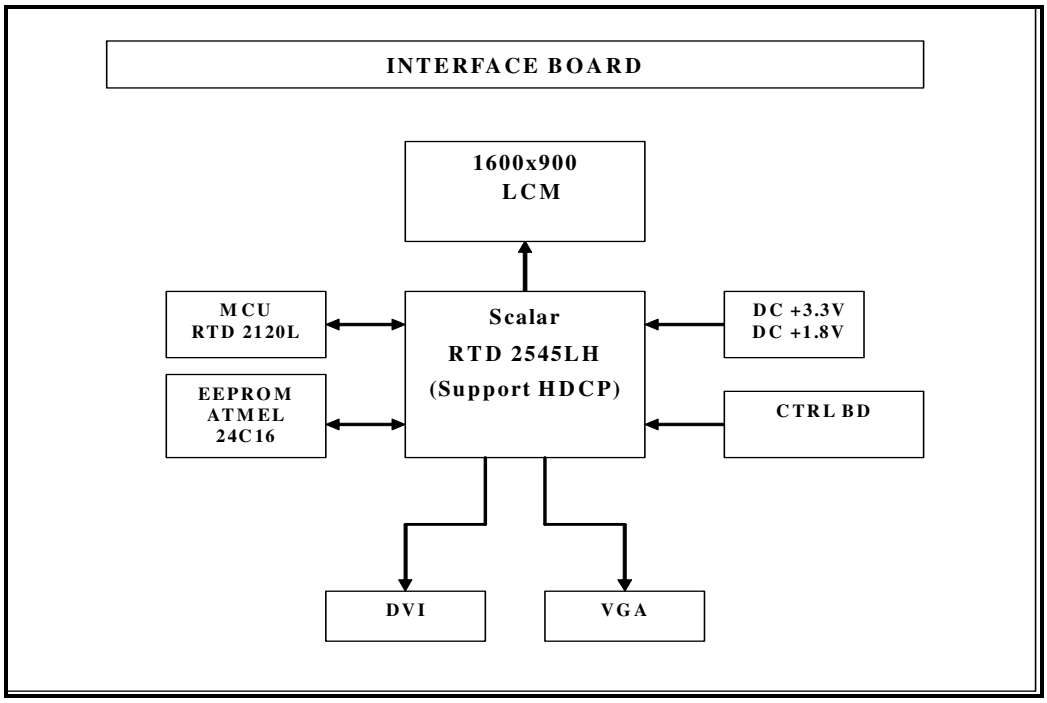
The X203H consists of a LCD module with 2 lamps, a power board, a control board, and an interface board. The block diagram is shown as below.



III. Circuit Implementations:

A.) THE MAIN BODY:

A-1.) Interface board block diagram :



(a) Circuit operations:

A basic operation theory for this interface board is to convert analog signals of Red, Green and Blue to digital signals of Red, Green and Blue. The scaling IC has internal A/D converter, internal OSD, built in LVDS transmitter and auto-detect input timing functions. A/D converter is convert analog signal to digital data. OSD is offering adjustable functions to end-user. Detect timing is for detect change mode. LVDS transmitter is used to compress the digital RGB data, the Hsync, Vsync and pixel clock generated by Scaling then output to LCD module. MCU stores source code and offers H/W DDC2Bi function & controls system processing. EEPROM is stored DDC and HDCP data, OSD common data and user mode data.

(b) IC introduction:

1.) DDC (Display Data Channel) function: We use DDC IC to support DDC2Bi function. DDC data is store in 24C02 (EEPROM). Those data related to LCD monitor specification. PC can read them by “SDA” and “SCL” serial communication for I²C communication for DDC2Bi.

2.) Scalar IC: There are A/D, TMDS receiver, HDCP, Scaling, OSD and LVDS transmitter functions built-in the RTD2545LH IC. Scaling IC is revolutionary scaling and color engine,

capable of expanding any source resolution to a highly uniform and sharp image or down scaling from 1980x1020, combined with the critically proven integrated 8 bit triple-ADC and patented Rapid-lock digital clock recovery system. It also support detect mode and DPMS control.

3.) RTD2120L: Control unit, it controls all the functions of this interface board, just like the OSD display setting, the adjustable items, adjusted data storage, the external IIC communication, support DDC2Bi. .

4.) EEPROM: We use 24C016 to store all the adjustable data, user settings and HDCP Key and use 2 of 24C02 to store DVI and D-SUB EDID data.

A-2.) Control board introduction :

There are 6 keys for user's control which includes “Menu”, “Right”, “Left”, “Auto”, “Empowering”, and “Power”. The following descriptions are the introduction of these keys.

(1) “Menu” key: to enter sub-menus or select items.

(2) “Right” key: to select previous and to increase adjustment

(3) “Left” key: to select next and to decrease adjustment

(4) “Auto” key: to perform auto adjustment and Exit key

(5) “Empowering”: to Open the Acer eColor Management OSD and access the scenario modes

(6) “Power” key: to turn/off power of monitor

(7) LED: It indicates the DPMS status of this LCD monitor; green light means DPMS on (Normal operating condition). Amber light means DPMS off (Power Saving).
