## SERVICE MANUAL

## Caution

Be sure to read this manual before servicing. To assure safety from fire, electric shock, injury, harmful radiation and materials, various measures are provided in this Hitachi liquid crystal projector. Be sure to read cautionary items described in the manual to maintain safety before servicing.

## Service Warning

1. When replace the lamp, to avoid burns to your fingers. The lamp becomes too hot.
2. Never touch the lamp bulb with a finger or anything else. Never drop it or give it a shock. They may cause bursting of the bulb.
3. This projector is provided with a high voltage circuit for the lamp. Do not touch the electric parts of power unit (main), when turn on the projector.
4. Do not touch the exhaust fan, during operation.
5. The LCD module ass'y is likely to be damaged. If replacing to the LCD module ass'y, do not hold the FPC of the LCD module ass'y.

TERMINAL PANEL

Remote control transmitter

## REMOTE CONTROL TRANSMITTER

 and MENU ON functions disable the mouse control function.
## WARNING

The laser pointer of the Remote control transmitter is used in place of a finger or rod. Never look directly into the laser beam outlet or point the laser beam at other people. The laser beam can cause vision problems.

NOTE: To prevent any malfunction;

- Do not give the Remote control transmitter any physical impact. Take care not to drop.
- Do not place the heavy objects on the Remote control transmitter.
- Do not wet the Remote control transmitter or place it on any wet object.
- Do not place the Remote control transmitter close to the cooling fan of the projector.
- Do not disassemble the Remote control transmitter in case of malfunction. Please bring it to the service station.

## 4. Adjustment

## 4-1 Before adjusting

1. Before starting adjustment, warm up the projector for about 10 min. (Blank white)
2. Set Zoom Wide to Max. and project an image a distance of 40 inches.
3. Normalizing the video adjustment.
(Press the [MENU] button of the Remote control transmitter to display the Setup menu, then press the [RESET] button.)
*note : The setup menu is not displayed on with no signal.

## 4-2 Ghost adjustment

## Signals for internal adjustment

## 4-3 Flicker adjustment (V.COM adjustment)

## Signals for internal adjustment

4. Perform all adjustments from the Adjustment menu. Perform the following operations to display the Adjustment menu.
a.Press the [MENU] button of the Remote control transmitter (the Setup menu will appear).
b.Next, press the [RESET] button for 5 sec . or more (the Adjustment menu will appear).

## Adjustment procedure

1. Use DAC-P - GHOST-W: in the Adjustment menu to adjust so that ghost is at a minimum.
(Set the adjustment value to 16 , then raise the value. When a ghost appears to the left of a vertical line, reduce the value by 2 steps.)

## Adjustment procedure

1. Make this adjustment after completing the adjustment in 4-2 Ghost adjustment.
2. Use DAC-P - V.COM - R: in the Adjust menu to adjust so that the flicker at the center of the screen is less than the flicker at the periphery.
(When the flicker is about the same across the whole screen, adjust so that the flicker at the center of the screen is somewhat less than elsewhere.)
3. In the same way, use DAC-P - V.COM - G: in the Adjustment menu to adjust the G color flicker.
4. In the same way, use DAC-P - V.COM - B: in the Adjustment menu to adjust the B color flicker.

4-4 PSIG adjustment (vertical stripe adjustment)

## Signals for internal adjustment

## 4-5 White balance adjustment

1. Perform these adjustments after the PSIG adjustment described in Section 4-4.
2. First, adjust the $G$ color.
3. Place the cursor on Slide Show in the Adjust menu [A/D], press the [ $\quad$ ] key three times to display $G$ monochrome and adjust the illuminance at the center of the screen. Make a note of the setting (here assumed to be A [Ix]). Press the MENU key to return.
4. Adjust Gamma $86 \%$ and $G$ : in the Adjust menu so that illuminance $(\mathrm{Y})$ at the center of the screen is adjusted as follows.
$\mathrm{Y}=\mathrm{A} \times 0.712 \pm 20[\mathrm{x}]$
5. Adjust Gamma, $43 \%$ and G : in the Adjust menu so that illuminance $(\mathrm{Y})$ at the center of the screen is adjusted as follows.
$\mathrm{Y}=\mathrm{A} \times 0.155 \pm 5[\mathrm{~lx}]$
6. Adjust Gamma, $29 \%$ and $G$ : in the Adjust menu so that illuminance $(\mathrm{Y})$ at the center of the screen are adjusted as follows.
$\mathrm{Y}=\mathrm{A} \times 0.064 \pm 3[\mathrm{~lx}]$
7. Adjust Gamma, $14 \%$ and G : in the Adjust menu so that illuminance $(\mathrm{Y})$ at the center of the screen is adjusted as follows.
$\mathrm{Y}=\mathrm{A} \times 0.014 \pm 2[\mathrm{~lx}]$
8. Adjust Gamma $0 \%$ and $G$ : in the Adjust menu so that illuminance $(\mathrm{Y})$ at the center of the screen is adjusted as follows.
$\mathrm{Y}=\mathrm{A} \times 0.005 \pm 0.5[\mathrm{~lx}]$

## Adjustment procedure

1. Make this adjustment after completing the adjustment in 4-3 Flicker adjustment.
2. Use DAC-P - PSIG - G: in the Adjust menu to adjust so that the vertical lines spaced every 6 dots are as inconspicuous as possible.
3. Now, adjust the $R$ and $B$ colors.
4. Place the cursor on [A/D] - [SLIDE SHOW] in the ADJUST menu and press the [ $\downarrow$ ] key once to display a white screen. Then measure the color coordinates at the center of the screen and take a note of the setting (here assumed to be $\mathrm{x} 1, \mathrm{y} 1$ ). Press the [MENU] key to return.
5. Adjust Gamma, $86 \%$, R: and B: so that the color coordinates ( $x, y$ ) at the center of the screen take on the following values.
$x=(x 1-0.005) \pm 0.003$
$y=(y 1-0.010) \pm 0.005$
6. Adjust Gamma, $43 \%$, R: and B: so that the color coordinates ( $\mathrm{x}, \mathrm{y}$ ) at the center of the screen take on the following values.
$\mathrm{x}=(\mathrm{x} 1-0.005) \pm 0.003$
$y=(y 1-0.015) \pm 0.005$
7. Adjust Gamma, 29\%, R: and B: so that the color coordinates ( $\mathrm{x}, \mathrm{y}$ ) at the center of the screen take on the following values.
$\mathrm{x}=(\mathrm{x} 1-0.010) \pm 0.003$
$y=(y 1-0.020) \pm 0.005$
8. Adjust Gamma, $14 \%$, R: and B: so that the color coordinates ( $\mathrm{x}, \mathrm{y}$ ) at the center of the screen take on the following values.
$\mathrm{x}=(\mathrm{x} 1-0.010) \pm 0.003$
$y=(y 1-0.025) \pm 0.005$

Adjustment operations (reference)

## 4-6 Color uniformity adjustment

## Preparations

1. Perform these adjustments after the white balance adjustment described in Section 4-5.
2. Make a color uniformity adjustment for the following three tones.

- MIN tone (approx. 10\% input signal)
- MID tone (approx. 50\% input signal)
- MAX tone (approx. $75 \%$ input signal)
(Note that the MIN tone need not be adjusted when there is no conspicuous color shading during a black signal input.)

3. Place the cursor on the tone to be adjusted in the Adjust menu and press the [ $\boldsymbol{\nabla}$ ] key. This displays the Adjust Tone menu at the bottom of the screen. Select the major adjustment lattice point No. and color, then adjust them.
4. The major adjustment lattice point numbers (a total of 17 points) corresponds to the major adjustment lattice point positions in the diagram on the right. The color uniformity of the entire screen can be adjusted by adjusting the white balance for each of the points starting in order from the low numbers.
5. Adjustment point No. 1 should not be adjusted, because it controls the brightness of the entire screen.
6. To temporarily turn correction off, place the cursor on ON in the Adjust Tone menu and press the [ $\boldsymbol{\nabla}$ ] key. To turn it on again, place the cursor on OFF in the Adjust Tone menu and press the [ $\mathbf{\Delta}$ ] key.
7. Although this adjustment can also be made using internal signals, we will here use the [MENU SELECT] key on the Remote control transmitter to select the following two signals.

- Solid monochrome adjustment color (use G color adjustment when a color differential meter is used)
- Solid white (use for adjustment other than above)

8. Reset color shading correction before adjustment.

- When 3 tones and all colors are to be reset, place the cursor on [C. UNIF]. in the Adjust menu, press the [RESET] key and select [DEFAULT].
- When only 1 tone is to be reset, place the cursor on the tone to be reset press the [RESET] key and select [DEFAULT].
- Single tone and monochrome resets cannot be performed.

Adjust menu

| :--- | :--- | :--- | :--- |

| LEVEL | MIN | MID | MAX |
| :--- | :--- | :--- | :--- |

Adjust Tone menu

## Adjustment procedure 1

## (when a color differential meter is used)

1 First adjust [MIN] tone [G:].
Unless there is conspicuous black uniformity, there is no need to adjust. (Go to step 7 if no adjustment is required.)
2 Select adjustment point [No. 2] [G:].
When the background is [G] monochrome, press the [MENU SELECT] key on the Remote control transmitter to change to solid white.
3 Adjust the color coordinates of adjustment point [No. 1] and make a note of them.
Assume that they are $x=x 1, y=y 1$.
Note : When the CL-100 color and color difference meter is used, the [ $\Delta$ ](delta) mode is convenient. When adjustment point [No. 1] color coordinate has been selected, set the slide switch on the side to $[\Delta]$ (delta) while holding down the [F] button on the front panel. The measurement shown after this displays the deviation from measurement point 1.
4 Now measure the color coordinates of measurement point [No. 2] and adjust [No. 2] and [G:] so that the color coordinates are as follows.
$y=y 1 \pm 0.030$ (adjust $Y$ only)
Similarly, measure adjustment points [No. 3] to [No. 9] and adjust their color coordinates starting in order from the small number points.
5 Then measure the color coordinates for adjustment point [No. 10] and adjust [No. 10] and [G:] so that the color coordinates are as follows.
$y=y 1 \pm 0.050$ (adjust $Y$ only)

Major adjustment lattice point position

Similarly measure adjustment points [No. 11] to [No. 17] and adjust their color coordinates starting in order from the small number points.
6 This completes the adjustments required for [MIN].
Note : Since excessive correction may lead to a correction data overflow during internal calculations, use the following values for reference.
[No. 2] to [No. 9] $\pm 40$ or less
[No. 10] to [No. 17] $\pm 70$ or less
7 Then adjust [MAX] tone [G].
Select [No. 2] [G:]. If the background is white solid, press the [MENU SELECT] key on the Remote control transmitter to change to [G] monochrome.
8 Measure the illuminance of measurement point [No. 2] and [No. 3]. Temporarily set [No. 2] to illuminance Y 2 and [No. 3] to illuminance Y 3 [Ix].
9 Adjust the illuminance of measurement point [No. 2] and [No. 3] to their average values. Thus illuminance Y2' and Y3' of measurement points [No. 2] and [No. 3] should be the following after adjustment.
$\mathrm{Y}^{\prime}{ }^{\prime}=\mathrm{Y} 3^{\prime}=(\mathrm{Y} 2+\mathrm{Y} 3) \div 2 \pm 20[\mathrm{Ix}]$
10. Next, measure the illuminance of measurement point [No. 10] and [No. 11].
Adjust the illuminance of measurement point [No. 10] and [No. 11] to their average values. Thus illuminance Y10' and Y11' of measurement points [No. 10] and [No. 11] should be the following after adjustment.
$\mathrm{Y} 10 '=\mathrm{Y} 111^{\prime}=(\mathrm{Y} 10+\mathrm{Y} 11) \div 2 \pm 20[\mathrm{Ix}]$
This completes [G] color adjustments.
11. Then adjust $[M A X]$ tone $[R]$ and $[B]$. Select [No. 2] [B:] and press the [MENU SELECT] key on the Remote control transmitter to change to solid white.
12. Adjust the color coordinates of adjustment point [No. 1] and make a note of them.
Assume that they are $x=x 1, y=y 1$.
13. Now measure the color coordinates of measurement point [No. 2] and adjust [No. 2] [R:] and [B:] so that the color coordinates are as follows.
$x=x 1 \pm 0.005, y=y 1 \pm 0.010$
Similarly, measure adjustment points [No. 3] to [No. 9] and adjust their color coordinates starting in order from the small number points.

## Adjustment procedure 2 (visual inspection)

1. First adjust [MIN] tone [G:].

Unless there is conspicuous black shading, there is no need to adjust. (Go to step 4 if no adjustment is required.)
2. Adjust only [G:] of measurement points [No. 2] to [No. 17] in number order to minimize color shading. (Use the deviation range information for each measurement point given below as reference.)
3. This completes [MIN] tone adjustments.
4. Then adjust [MAX] tone [G] color.
5. Select [No. 2] [G:].

If the background is [G] monochrome, press the [MENU SELECT] key on the Remote control transmitter to change to solid white.
6. View measurement point [No. 2] and [No. 3]. Lower the [G] color intensity only of the color point whose [G] color is more intense than measurement point [No. 1].
7. View measurement point [No. 10] and [No. 11]. Lower the [G] color intensity only of the color point whose [G] color is more intense than measurement point [No. 1], and raise the intensity of the point whose color intensity is lower than measurement point [No. 1].
14. Then measure the color coordinates for adjustment point [No. 10] and adjust [No. 10] [R:] and [ $\mathrm{B}:]$ so that the color coordinates are as follows.
$x=x 1 \pm 0.005, y=y 1 \pm 0.010$
Similarly measure adjustment points [No. 11] to [No. 17] and adjust their color coordinates starting in order from the small number points.
15. This completes [MAX] tone adjustments.
16. Now make similar adjustments for [MID] tone. (Note that [G] color adjustment tolerance is $\pm 10$ [lx].)
8. This completes adjustments for [MAX] tone [G].
9. Now adjust the [MAX] tone for colors [R] and $[B]$.
10. View measurement points [No. 2], [No. 3], [No. 10] and [No. 11]. Adjust the [R] and [B] of each measurement point so that they have the same color as measurement point [No. 1].
Adjustment technique :
First, adjust [B:] of the point whose color is to be adjusted so that it approximates that of [No. 1]. If [R:] is low at this time, the image will have cyan cast, in which case [R:] is increased. On the other hand, if [ $R$ :] is excessive, the image will have a magenta cast, in which case [ $R$ :] is decreased.
Overall, a cyan cast makes it easy to see color shading.
11. Next, view measurement points [No. 4], [No. 5], [No. 12] and [No. 13] and make similar adjustments.
12. Then adjust measurement points [No. 6], [No. 7], [No. 8], [No. 9], [No. 14], [No. 15], [No. 16] and [No. 17]. This completes the [MAX] tone adjustment.
13. Make similar [MID] adjustments as described in steps 4 to 12 above.

## 5. Troubleshooting

Check points at trouble shooting

## 6. Service points

## - Cautions when removing the PWB Ass'y Main

When removing the PWB Ass'y Main, there is danger of damaging the connector connecting cables and the PWB Ass'y Signal.

1) Disconnect 11 cables and remove 6 screws.

2) Lift up the rearward of the PWB Ass'y Main to the front.

3) Disconnect 2 cables lifting the PWB Ass'y Main.

## - Before Replacing the LCD / Lens Prism

You should not replace separately the parts of the liquid crystal LCD / Lens Prism because it works properly only when used together. Therefore, regarding these parts, you can either replace part, LCD / Lens Prism Ass'y, or send the whole unit LCD / Lens Prism Ass'y back to HITACHI, where we will replace the malfunctioning part, recondition the device and send it back to you. In that case please contact our distributor.

## - Air Filter Maintenance

The air filter should be cleaned as described below at intervals of approximately 100 hours.

1. Switch the projector power supply OFF, and remove the power cord from the power outlet.
2. Clean the air filter with a vacuum cleaner.

- Switch power OFF and remove the power cord from the power outlet before beginning maintenance work. Please read the separate "SAFETY INSTRUCTIONS" thoroughly to ensure that maintenance is performed correctly.
- Replace the air filter if contamination cannot be removed, or if it is damaged. Contact your dealer in such case.(Option Air filter : MU01291)
- Do not use the equipment with the air filter removed.
- When the air filter is clogged with dust etc. the CHECK AIR FLOW message appears on the screen and the power supply is switched OFF automatically to prevent the temperature rising inside the projector.

## - Loading the Battery

Install the AA batteries into the remote control.

1. Remove the battery cover.

Push the knob while lifting up the battery cover.
2. Loading the batteries.

Make sure the plus and minus poles are correctly oriented.

3. Close the battery cover.

## CAUTION

- Use only the specified batteries with this remote control. Also, do not mix new and old batteries.

4This could cause in battery cracking or leakage, which could result in fire or personal injury.

- When loading the batteries, make sure the plus and minus terminals are correctly oriented as indicated in the Remote control transmitter transmitter. Incorrect orientation could cause battery cracking or leakage, which could result in personal injury or pollution of the surrounding environment.
- When you dispose the battery, you obey the law in the relative area or country.
- Keep the battery away from children and pets.
- When not to be used for an extended period, remove the batteries from the Remote control transmitter.

NOTE: Replace the batteries when remote control operation becomes difficult.

- Lamp

## HIGH VOLTAGE HIGH TEMPERATURE HIGH PRESSURE

Contact your dealer before replacing the lamp.
(Option lamp: DT00331)
Before replacing the lamp, switch power OFF, remove the power cord from the power outlet, and wait approximately 45 minutes until the lamp has cooled. The lamp may explode if handled at high temperatures.

- For disposal of used lamp, treat according to the instruction of community authorities.
- Since the lamp is made of glass, do not apply shock to it and do not scratch it.
- Also, do not use old lamp. This could also cause explosion of the lamp.
- If it is probable that the lamp has exploded (explosive sound is heard), disconnect the power plug from the power outlet and ask your dealer to replace lamp.
The lamp is covered by front glass, but, in rare cases, the reflector and the inside of the projector may be damaged by scattered broken pieces of glass, and broken pieces could cause injury when being handled.

- Do not use the projector with the lamp cover removed.

## Lamp life

Projector lamps have a finite life. The image will become darker, and hues will become weaker, after a lamp has been used for a long period of time.
Replace the lamp if the LAMP indicator is red, or the CHANGE THE LAMP message (see P. 20 Table 8) appears when the projector is switched ON.
NOTE: The LAMP is also red when the lamp unit reaches high temperature. Before replacing the lamp, switch power OFF, wait approximately 20 minutes, and switch power ON again. If the LAMP indicator is still red, replace the lamp.

## Replacing the lamp:

1. Switch the projector OFF, remove the power cord from the power outlet, and wait at least 45 minutes for the unit to cool.
2. Prepare a new lamp.
3. Check that the projector has cooled sufficiently, and gently turn it upside down.
4. Loosen the two screws as shown in the diagram, and remove the lamp cover.
5. Loosen the three screws, and gently remove the lamp while holding the grips. Touching the inside of the lamp case may result in uneven coloring.
6. Install the new lamp and tighten the three screws firmly. Also steadily push the opposite side of the screwed lamp into the unit.
7. Replace the lamp cover in position and tighten the two screws firmly.

8. Gently turn the projector right-side up.

## CAUTION

!

- Ensure that screws are tightened properly. Screws not tightened fully may result in injury or accidents.
- Do not use the projector with the lamp cover removed.

## Resetting the lamp timer:

Reset the lamp timer after replacing the lamp. When the lamp has been replaced after the LAMP indicator is red, or the CHANGE THE LAMP message is displayed, complete the following operation within ten minutes of switching power ON. The power will be turned off automatically in over 10 minutes.

1. Switch power ON, and press the TIMER button on the Remote control transmitter, or the RESET $\Theta$ button on the control panel, for approximately three seconds. The 'LAMP xxxx hr' message will appear on the lamp timer on the bottom of the screen.
2. Press the MENU button on the Remote control transmitter, or the RESET button on the control panel, while the lamp timer is displayed. The 'LAMP xxxx $\square \rightarrow 0$ CANCEL' message will then appear.
3. Press the $\odot$ and select 0 , and wait until the timer display is cleared.

## NOTE:

Do not reset the lamp timer without replacing the lamp. Reset the lamp timer always when replace the lamp. The message functions will not operate properly if the lamp timer is not reset correctly.

## Message table

## On-screen display

The following messages are displayed on the screen.

| "CHANGE THE LAMP" <br> "AFTER REPLACING LAMP, RESET <br> THE LAMP TIMER" | Lamp has 1,700 hours on it and may need to be changed. |
| :---: | :--- |
| "CHANGE THE LAMP" <br> "AFTER REPLACING LAMP, <br> RESET THE LAMP TIMER" <br> "THE POWER WILL TURN OFF <br> AFTER 20 Hr." | Lamp has 1,979 hours on it. <br> See "Reset the lamp timer" |
| Blinking of "CHANGE THE LAMP" <br> "AFTER REPLACING LAMP, <br> RESET THE LAMP TIMER" <br> "THE POWER WILL TURN OFF <br> AFTER 0 Hr." | When the lamp has 2,000 hours or more on it, the message will blink, and the <br> power will turns off after 10 minutes. |
| "NO INPUT IS DETECTED" | Signal is not in. |
| "SYNC IS OUT OF RANGE" | The horizontal or vertical frequency of the input signal exceeds the range of <br> the projector, it cannot be displayed. |
| "CHECK THE AIR FLOW" | Please remove the obstruction before the suction port. |

## Indicator display

The ON indicator, LAMP indicator and TEMP indicator will light or blink in the following cases.

| ON indicator | LAMP indicator | TEMP indicator | Meaning | Remedy |
| :---: | :---: | :---: | :--- | :---: |
| Lights orange | Goes off | Goes off | Standby mode | - |
| Blinks green | Goes off | Goes off | During warming up | - |
| Lights green | Goes off | Goes off | During operation | - |
| Blinks orange | Goes off | Goes off | During cooling down | - |
| Lights red | Lights red | Goes off | Lamp cannot light | Cool projector by power off for <br> 20 minutes. <br> If the indicator is still lit, lamp <br> may be defective. Replace. |
| Lights red | Blinks red | Goes off | Lamp is not inserted or <br> Lamp cover is open | Securely insert the lamp or <br> shut the lamp door. |
| Lights red | Goes off | Blinks red | Cooling fan accidented or PWB <br> ass'y SENSOR accidented. | Replace fan, PWB ass'y SENSOR <br> or connect CNTH. |
| Lights red | Goes off | Lights red | Inside temperature becomes <br> high | Please remove the obstruction <br> before the suction port. |

When inside temperature becomes high, to protect the projector, the lamp may be turned off and the lamp indicator lights red, or the projector will be shut down and the all indicator display goes off.

## 13. Option parts list

Caution The cables (power cord/video cable, audio cable, RGB cable and other cables) must be used with the core set to the projector side.
Use the cables which are included with the projector or specified.

| No. | PARTS NO. | PARTS NAME |
| :---: | :--- | :--- |
| 1 | HL01571 | Remote control transmitter Unit With laser pointer |
| $2^{*}$ | EW06471 | PS/2 RMU-cable |
| $3^{*}$ | EW06472 | ADB RMU-cable |
| 4 | EW06473 | SERIAL RMU-cable |
| 5 | EW05941 | USB (A-B) cable w/core |
| 6 | HL01581 | Remote Mouse Receiver Ass'y |
| 7 | UK04661 | Remote control transmitter Unit Ass'y (No.1+2+3+4+5+6) |
| 8 | EW06561 | RS-232C cable Ass'y |

*) When you use the PS/2 RMU-cable (No. 2 above) or the ADB RMU-cable (No.3) ,the serial RMU-cable (No.4) and the Remote Mouse Receiver Ass'y (No.6) must be used together.

## RS-232C communication

Caution The specified RS-232C cable has the user's manual with RS-232C command table.
(1) Turn off the projector and computer power supplies and connect with the RS-232C cable.
(2) Turn on the computer power supply and, after the computer has started up, turn on the projector power supply.

## Communications setting

19200bps, 8N1

## 1 Protocol

Consist of header ( 7 bytes) + command data ( 6 bytes).

## 2 Header

BE + EF + $03+06+00+$ CRC_low + CRC_hige
CRC_low : Lower byte of CRC flag for command data.
CRC_high : Upper byte of CRC flag for command data.

## 3 Command data

Command data chart

| byte_0 | byte_1 | byte_2 | byte_3 | byte_4 | byte_5 |
| :---: | :---: | :---: | :---: | :---: | :---: |
| Action | Type |  | Setting code |  |  |
| low | high | low | high | low | high |

Action (byte_0-1)

| Action | Classification | Content |
| :---: | :--- | :--- |
| 1 | SET | Change setting to desired value. |
| 2 | GET | Read projector internal setup value. |
| 4 | INCREMENT | Increment setup value by 1. |
| 5 | DECREMENT | Decrement setup value by 1. |
| 6 | EXECUTE | Run a command. |

## Requesting projector status (Get command)

(1) Send the request code Header + Command data ('02H'+ 000 H ' type ( 2 bytes) + ${ }^{\prime} 00 \mathrm{H}^{\prime}+{ }^{\prime} 00 \mathrm{H}$ ') from the computer to the projector.
(2) The projector returns the response code '1DH'+ data (2 bytes) to the computer.

## Changing the projector settings (Set command)

(1) Send the setting code Header + Command data (' $01 \mathrm{H}^{\prime}+{ }^{\prime} 00 \mathrm{H}$ '+ type ( 2 bytes) + setting code ( 2 bytes)) from the computer to the projector.
(2) The projector changes the setting based on the above setting code.
(3) The projector returns the response code ' 06 H ' to the computer.

## Using the projector default settings (Reset Command)

(1) The computer sends the default setting code Header + Command data (' $06 \mathrm{H}^{\prime}+{ }^{\prime} 00 \mathrm{H}$ '+ type ( 2 bytes) $+^{\prime} 00 \mathrm{H}^{\prime}+{ }^{\prime} 00 \mathrm{H}$ ') to the projector.
(2) The projector changes the specified setting to the default value.
(3) The projector returns the response code ' 06 H ' to the computer.

## Increasing the projector setting value (Increment command)

(1) The computer sends the increment code Header + Command data (' $04 \mathrm{H}^{\prime}+{ }^{\prime} 00 \mathrm{H}^{\prime}+$ type ( 2 bytes ) + ${ }^{\prime} 00 \mathrm{H}^{\prime}+{ }^{\prime} 00 \mathrm{H}$ ') to the projector.
(2) The projector increases the setting value on the above setting code.
(3) The projector returns the response code ' 06 H ' to the computer.

## Decreasing the projector setting value (Decrement command)

(1) The computer sends the decrement code Header + Command data (' $05 \mathrm{H}^{\prime}+\mathrm{O} 00 \mathrm{H}$ ' + type ( 2 bytes) + ' 00 H ' + ' 00 H ') to the projector.
(2) The projector decreases the setting value on the above setting code.
(3) The projector returns the response code ' 06 H ' to the computer.

## When a command sent by the projector cannot be understood by the computer

When the command sent by the projector cannot be understood, the error command ' 15 H ' is returned by the computer. Some times, the projector ignores RS-232C commands during other works. If the error command ' 15 H ' is returned, please send the same command again.

## When data sent by the projector cannot be practice

When the command sent by the projector cannot be practice, the the error code ' 1 cH ' +'xxxxH' is returned.
When the data length is greater than indicated by the data length code, the projector will ignore the excess data code.
Conversely, when the data length is shorter than indicated by the data length code, an error code will be returned to the projector.

Caution - Operation cannot be guaranteed when the projector receives an undefined command or data.

- Provide an interval of at least 40 ms between the response code and any other code.
- The projector outputs test data when the power supply is switched ON, and when the lamp is lit. Ignore this data.
- Commands are not accepted during warm-up.
